

ELDAR LABS
11/20/2021

As NFTs (non-fungible tokens) became more considerably mainstream and popular, we noticed there is a need for a project to reinvigorate your entertainment and create a community like no other in the entire NFT space. We aspire to be an inclusive project where all are welcome, and not limited to Orx owners only. The Orx Army project is an NFT collection with verified ownership of each unique NFT on the XRP Ledger (when xls-20d gets implemented on the ledger). When the upgraded XRPL amendment is executed and the Ledger is able to mint NFTs using the ledger, the Orx NFTs will be minted, and then stored on the owner's Connected Wallet. This is an NFT project incorporating not just 1 type of character model, but 4 different character models and 150+ unique traits.

What is an Orx?

Orx are ore creatures that are incredibly cruel, born from darkness, and power hungry for battle. Each Orx is given a respectable rank in the hierarchy: Overlords, Warchiefs, Captains, and Grunts. When they come together, they are quite the pack of hunters and will stop at nothing. Orx must prepare for war with various weapons, and armor to ensure a chance at survival in the pits, and on the battlefield.

Each Orx will be a randomly generated "Orc" NFT based on the character model randomly picked, and the attributes randomly picked by the NFT algorithm. Each character has a different chance of getting generated.

**Each Orx you own, will be represented within a digital card on our website in your profile in which that card, like a trading card game, will have features that showcase the skills, rarity, and other aspects of your Orx directly on the card.

All of your Orx "cards" will be located in your profile that visually shows your cards at any time. Your NFT token will have 2 files of which one is just the image of the Orx with the background attribute, and the second image file will be that of the actual Card (seen in the game).

Rarity:

Overlords are the rarest-rolled character NFT from the collection, as well as the strongest and have a 10% chance of minting. Grunts are the most common and make up nearly 40% of the rolling chance of the NFT characters. Warchiefs have a 20% chance, and Captains have a 30% chance. Each Orx has a chance to obtain up to 6 different attribute categories such as: weapons, armor, pendants and attachments, facial features, skin, and character image backgrounds. The actual card itself, has additional attributes that correspond to the rarer NFT traits, such as silver, gold, and holographic type effects on the cards. Each attribute class has its own scale of items based on rarity: common, uncommon, rare, epic, and legendary.

How is my Orx special?

As the Orx are minted, once the attributes and traits are put together, the Orx has a "Level" which is randomly determined by the character that was generated (attack, defense, speed, and health). The "Power Score" is the sum of all the added values from certain attributes like weapons, armor, and skin (which are generated based on rarity) with the health, attack, defense, and speed values combined. The rarer the items the Orx is minted with, the higher the power score is, as the most legendary Orx will potentially have all 6 legendary attributes minted. Weapons minted with your Orx will adjust your attack, armor will adjust your defense, and skin can adjust your health.

Cards will also have their own rarity effects like silver and gold lettering, holofoil effects, and even certain legendary attributes will have card motion effects. The cards will even display that specific Orx' progress to the next level as an "experience bar."

Orx Progression and the Game:

Orx owners can send their Orx into the "Pit" and fight against another randomly selected similar power Orx owners, and the winner is determined by players "battling" against each other via attacking, or defending and using the character's skills (Strength, Defense, Speed, and Health) to decide the winner. This game is a PvP card game that will have live matchmaking to battle other players using their NFTs.

The "game" is a turn based Card game that has different mechanics inspired by games like Yu-Gi-Oh, Gwent, and Skyweaver. Each player will take turns via a stamina system based on their Orx attack, and defense. The objective of the battle is to defeat your opponent, and gain experience.

Players can use gained "experience" (winning awards more experience) and upgrade a skill of their character for progression. This is one of the first NFT projects to incorporate a "character" progression model that actually changes the owners' NFT by skill traits to further develop their Orx. This encourages daily and weekly engagement sending your Orx into battle via the Pit to level up and progress your Orx. Each Orx card you own, will showcase its Attack, Defense, Speed, Health and other relevant features. The stronger your Orx becomes, the stronger your opponents will become too. Each level you progress gives 1 "skill" point to apply to any of the 4 character skills. Each numerical level will require more experience to "level up." The starting level of your Orx is determined by the character that was selected, since each character represents a different "rank" in the Orx hierarchy. The starting levels for all Orx will range from 20 to 55, and the maximum level in the progression system is currently capped at 155.

Marketplace:

Our game will have its own NFT marketplace for Orx NFT owners to “trade” their NFT cards. The marketplace will be where you can view other Orx levels, health, attack, defense, and stamina stats to decide what Orx you are looking for. You will be able to filter Orx NFTs for sale by trait names, trait-rarity, Orx name, attribute categories, and skill values.

You can trade NFTs with other owners to get a “stronger” NFT, or you can sell yours for XRP. Each Orx you own, will have its own stats for battle, so if you want to buy more Orx to level up yourself by playing the game, you can. Our marketplace will NOT have any fees associated with our project NFTs, meaning you can trade your Orx any time you want with no additional fees, except the royalty fee, and XRPL transaction fee.

NFTs listed for sale are NOT in custody of the project, it remains the owner's custody until sold. The XRPL is decentralized, and run by node and validator operators that confirm transactions based on a consensus protocol. Failed transactions are not at the responsibility of Eldar Labs and its team members. All buy offers for an owner's NFT, are subject to review by the OWNER only, and no one else. When a buy offer is selected and approved by the NFT owner, the NFT is transferred to the new owner's wallet. All transactions are public via the XRPL interface, and specific NFT transaction history will be viewable on our marketplace.

Other NFT projects that have their NFT cards on our platform, will have a small fee % to help fund our platform, and those projects may or may not have their own royalty fees. Our marketplace will launch with Orx NFT support ONLY. The next phases of our platform will later support other NFT projects that partner with ours, and have their own NFT Cards in our game.

Tokenomics:

There will be ZERO airdrops.

There will be ZERO tokens pre-mint/game. We may decide to have a token specifically for the game—TBD.

There will also be an in-game token used internally for special event data to be transacted on the XRPL.

This token is NOT for public distribution, and holds 0 monetary value, and will not be black holed. The ONLY purpose of the token is to be burned during events in game such as but not limited to: upgrading the skill of your ORX, winning a battle etc. The result will be input in the "memo"/notes section of the transaction and permanently sent on the XRPL. This data will be stored in the game historical record keeping. An example may be: "ORX #213 upgrades skill Attack by 1" or "ORX #213 defeats ORX #3014."

Royalty-nomics:

The NFT collection will have a royalty feature in the contract, some of which will be divided among the team, as well as 50% of the TOTAL royalties to be determined by the community for CHARITY. Each NFT owned empowers 1 vote for community votes for what charity to give to monthly, and a smaller portion to be openly voted on by the community.

8% royalty to the Project Team Wallet overall, 4 of the 8% goes to the team, 3 of the 8% goes to the Charity Vote each month, and the final 1% goes to an open community vote. The open community vote examples could be but not limited to: donation to another charity, going to a specific organization, or a country in need etc.

Community:

As part of the ORX Community, you will have exclusive access to communications with other ORX owners. Each NFT owned empowers 1 vote for community votes for what charity to give to monthly, and also a smaller portion to be openly voted on by the community. As an ORX owner you will have the opportunity to give back to those in need via charity donation, and bring further attention to XRP and the XRPL. Each charity that will become listed for community votes each month, will need to agree and accept the usage of XRP as a donation platform. This brings awareness to XRP and the XRPL, as well as social responsibility that everyone part of the community can be a part of.

Is that all?

No.

Future NFT collections in the works will be announced later, and after the first collection minting has completed and the game has all mentioned functions.

For members that keep at least 1 original mint, will get 1 free future mint of the next NFT Collection we have planned etc.

A merchandise store/collection will be announced after the minting date.

Disclosure:

Nothing in this document should be used as financial advice, or means to make a decision on whether to invest in this project or not. XRP is not a security. The XRPL is publicly run by those who wish to run their own nodes for the Ledger. ORX is not a security. This project is completely independent from the value of XRP. Everyone should do their own due diligence and research before making any financial decisions. This document can change over time, and is not to be considered immutable.

Ownership of any NFTs created by this project and IP, are to be at the responsibility of the user, and their cryptocurrency wallet. Losing your NFT is not our responsibility and therefore we are not subject to compensation for lost value and other damages.

The NFTs minted are the user's property, and all other IP and assets are owned by this project team members. Purchasing an Orx token, or Orx NFT, or minting an Orx NFT is accepting the terms of this document.
